Tiguan R model shown

Tiguan 'It's an R Thing'

Drivers looking for breathtaking performance in an SUV need look no further than Volkswagen's Tiguan R.

A barnstorming excitement machine, the Tiguan R makes full use of its prodigious power and effortless roadholding ability to devour the bitumen ahead of it. At the same time, it's versatile enough to meet the needs of an active family. The combination makes it unique among sports utility vehicles – reliably practical, but with deep reserves of pulse-racing performance.

The Tiguan R features the same engine as used in the Golf R, delivering blistering acceleration and an impressive top-end speed. Power is relayed to the road via a seven-speed DSG gearbox offering lightning-fast gear changes, while the Tiguan R's 4MOTION all-wheel drive system delivers outstanding traction no matter the driving conditions.

The Tiguan R has the looks to match its prowess. With its hunkered stance, muscular curves and sporty R styling, which includes prominent front and rear bumpers air intake, IQ.LIGHT matrix LED headlights and signature blue brake calipers, the Tiguan R makes a bold design statement. The cabin is equally as expressive and blends sporty highlights with a range of innovative, driver-focused technology to amplify driving enjoyment. Blue decorative stitching, a precision sports steering wheel and R Nappa leather appointed upholstery[^] are all features distinctive to the Tiguan R.

There are boundless reasons to want to drive a Tiguan R. And you certainly don't need to be a car expert to succumb to the Tiguan R's powerful allure. For all the appealing, racing-inspired features contained in the Tiguan R – and there are many – it's possible to want one just 'because'.

We at Volkswagen like to call it an R thing.

[^]Leather appointed seats has a combination of genuine and artificial leather, but are not wholly leather.

Exterior

The Tiguan R is unmistakably an SUV, but its broad stance and aerodynamic contours suggest an abundance of performance just waiting to be unleashed.

From front to rear, the Tiguan R wears its signature R styling as a bold declaration to other road users. A prominent front bumper features a wide and emphatic air intake nestled below IQ.LIGHT matrix LED headlights with Dynamic Light Assist, daytime driving lights, dynamic cornering lights and a dynamic indicator.

Premium LED rear tail lights with brake light effect and dynamic indicators form part of a streamlined rear-end, complete with a glossy black rear diffuser housing eye-catching quad chrome exhaust pipes. Access to the boot is via an Easy Open & Close tailgate for added driver convenience.

The vehicle's R logos are displayed with pride and are positioned in the front grille and on the tailgate next to the iconic Volkswagen logo. An R logo can also be found on the Tiguan R's side spears, which form part of an integrated and unbroken shoulder line that stretches to the tailgate.

It's when the Tiguan R is viewed in profile that it really asserts its identity. Power folding mirrors in matte silver and with memory are a distinctive R feature, as are signature blue brake calipers with R logo, which are as impressive in performance as they are in appearance. Striking 21-inch 'Estoril' alloy wheels are a perfect complement to the Tiguan R's blue brake calipers and are another reminder of the vehicle's brimming performance potential.

Tiguan R model shown

Interior

The Tiguan R's sleek and sporty exterior aesthetic is brought inside the cabin, where every consideration has been given to style, function and comfort.

One glance at the leather sports steering wheel reveals this to be no ordinary Tiguan. Decorative blue stitching and R badge with blue highlights in the bottom spoke are both signature R features, while large racing paddles allow for rapid shifting through the gears. A light press of the R button on the steering wheel allows the driver to toggle through driver profile selections from 'Comfort' to 'Sport'. But a hard press awakens the beast in every Tiguan R by instantly engaging 'Race' mode.

Nestled behind the steering wheel is the Tiguan R's Digital Cockpit Pro, which the driver can configure to show navigation information, infotainment options and driving data. It's complemented by a striking 9.2-inch Discover Pro Navigation System offering gesture and voice control for ease of use.

The R theme continues elsewhere in the cabin, such as on the Tiguan R's Nappa leather appointed trim seats* with their blue decorative stitching and prominent R logo. The front seats are heated and offer 12-way adjustment with memory and easy entry for the driver. Black headliner and illuminated R scuff plates add further to the cabin's appeal.

The Tiguan R makes a bold statement by projecting an illuminated R logo onto the ground when the front doors are opened. For the ultimate mood-setter, the Tiguan R even offers a choice of ambient interior lighting colours. Create your own virtual colour landscape by choosing from among 30 appealing hues.

Performance

Proving it's possible to have your cake and eat it, the Tiguan R takes the latest generation Golf R engine and incorporates it into an SUV for a combination of sheer performance and all-round practicality. It's rare that an SUV can offer a thrill-aminute driving experience quite like this Tiguan R.

The fabled 235TSI engine the Tiguan R shares with its Golf R cousin emits 235kW of power and 400Nm of torque, enough to propel the Tiguan R from 0–100km/h in 5.1 seconds**.

Combine the Tiguan R's remarkable power output with a 4MOTION all-wheel drive system with R-Performance Torque Vectoring and the Tiguan R can hold its speed into fast corners and through the apex without loss of traction. It does this by distributing the engine's output not just between the vehicle's front and rear axles, but also variably between the two rear wheels. The all-wheel drive system is networked via the Vehicle Dynamics Manager (VDM) with other running gear systems such as Extended Electronic Differential Lock (XDL) and Adaptive Chassis Control for outstanding handling and precision.

Assisting the Tiguan R are upgraded performance brakes that offer improved responsiveness and ferocious stopping power. The Tiguan R's front disc brakes have been cross-drilled to increase cooling efficiency and minimise 'brake fade', and both front and rear brakes feature blue brake calipers that are a hallmark of the Volkswagen R range.

Every drive in the Tiguan R is an emotive experience, but it's possible to accentuate the immersive growl of Tiguan R's quad exhaust by choosing from among four distinct engine sounds. Select 'Comfort', 'Sport', 'Race' or 'Pure' from the driving profile options available to customise the engine sound exactly as you like it. Selecting 'Pure' means no sound amplification is used, perfect for that original, pure engine sound.

Technology

Volkswagen accepts no compromise when it comes to ensuring driver and passenger safety. With its IQ.DRIVE suite of driver assistance and safety aids, the Tiguan R bundles together an extensive array of technologies to provide comprehensive peace of mind with every drive.

Among the features contained in IQ.DRIVE is Travel Assist*, an innovative system that allows for partially automated driving at a range of speeds. Travel Assist* uses the combined functions of Adaptive Cruise Control* (ACC) and Lane Assist* to accelerate, brake and maintain the Tiguan R's position within its lane. It can be activated with the simple press of a steering wheel button and uses sensors, radars and a camera to observe the space around the vehicle.

A number of driver aids contained in IQ.DRIVE exist to help drivers navigate the everyday challenges of city driving. Front Assist* with Pedestrian Monitoring will first alert the driver and then implement an emergency braking procedure to avoid striking a pedestrian about to cross the vehicle's path. Park Assist* takes the stress out of parking by helping the driver manoeuvre into a tight space. And Rear Cross Traffic Assist is an invaluable aid that warns the driver reversing out of a parking space that a vehicle is approaching.

Taking inspiration from the cockpit of fighter planes is the Tiguan R's ingenious Head Up Display*. Important driver information such as vehicle speed, navigation instructions and driver assistance system messages are projected onto a glass panel at the centre of the driver's field of vision. It's yet another example of the Tiguan R's forward-thinking approach to driver and passenger safety.

*Safety technologies are design to assist the driver, but should not be used as a substitute for safe driving practices.

Options

There's nothing like opening up the Tiguan R's cabin to the wide expanse of sky above. Give your passengers an unforgettable view of your surrounds when you choose the panoramic electric glass sunroof as an optional extra.

Slide and tilt adjustable, and incorporating an automatic wind deflector, the sunroof lets sunlight stream into the cabin while reducing buffeting wind. With the UV resistant electronic blind closed, you can be sure you're protected from the sun's harmful rays.

Tiguan R with optional Panoramic electric glass sunroof shown

Colours and Upholstery

The Tiguan R comes in a number of appealing paint colours to make it stand out from the pack. Choose from Pure White, Reflex Silver Metallic, Dolphin Grey Metallic or Deep Black Pearl, with distinctive 'R' hero colour Lapis Blue Premium Metallic also available.

Inside the cabin, Black Carbon Nappa leather[^] appointed trim seats with decorative blue stitching and R logo are comfortable enough for long journeys, but provide the contoured support you need for spirited driving.

Overseas Image Shown

Overseas models are shown for illustrative purposes only. Optional accessories at extra cost. Please note that the above accessories may have an effect on fuel efficiency. Items such as sports equipment and tablets are shown for illustration purposes only and are not available for purchase from Volkswagen Group Australia or its Dealers. For a full range of Volkswagen Genuine Accessories, please refer to the accessories tab at www.volkswagen.com.au or visit an authorised Volkswagen Dealer. *The Volkswagen Universal Traffic Recorder App (UTR App) is only for use in combination with the Universal Traffic Recorder (UTR/Dashcam) of Volkswagen Genuine Accessories. Its capabilities include live viewing, data management, a car finder function and being able to adjust the recorder's settings. All functions of the Volkswagen UTR app require an active data service between the Universal Traffic Recorder and your smartphone. Configurations vary by model (Front only or Front/Rear camera). Consult your local Volkswagen Dealer for further information. The UTR App is compatible with all Apple IOS devices and Android devices up to and including Android 11.

R Collection

Just like our R performance range, our premium R collection will also captivate with sleek styling, classic blue design notes and the iconic R badge. Get inspired by our exclusive R products and let your sporting spirit shine.

5 years Unlimited Kilometre Warranty

At Volkswagen, we pride ourselves on the highest quality standards that come with German engineering.

We back this commitment with a 5 year unlimited kilometre warranty on all new Volkswagen vehicles¹.

1 year Roadside Assist

Every new Volkswagen comes with a 1 year Roadside Assist membership².

That's 24 hour roadside assistance, emergency accommodation, car rental and towing as well as property and other assistance, all included for added peace of mind.

Volkswagen Care Plans

Volkswagen Care Plans³ have you covered for your first 3 or 5 scheduled services, providing you savings off the total Assured Service Pricing RRP. It's convenient, hassle-free scheduled servicing easily available for purchase at your local Volkswagen Dealer.

Assured Service Pricing

Assured Service Pricing⁴ gives you the comfort to know the cost of your first 5 scheduled services, when servicing your vehicle at any authorised Volkswagen dealership.

Our Volkswagen dealers have access to the latest diagnostic equipment and tools. Plus, they use Volkswagen Genuine Parts[®] to ensure your Volkswagen stays a Volkswagen.

Volkswagen Choice[^]

Guarantee the minimum future value of your Volkswagen

Naturally we understand that your Volkswagen represents a valuable investment, so we understand that you want to maintain it in premium condition. Volkswagen Choice[^] is a finance program tailored to the requirements of Volkswagen owners by providing assurance around your Volkswagen's future value[^], whilst offering simple monthly instalment financing options.

Whether you are selecting your new Volkswagen for business or personal use, you can choose the contract term that best suits your requirements. Enjoy the confidence that comes from having locked in a minimum value up front to be attributed to your vehicle at the end of your contract[^]. There are also no account keeping fees with a fixed interest rate.

1. Conditions and exclusions apply, see <https://www.volkswagen.com.au/en/owners-service/warranty.html>. Your rights under this warranty are provided in addition to, and in some cases overlap with, consumer guarantees under the Australian Consumer Law and do not limit or replace them.

2. Volkswagen Assist (Roadside Assistance) Conditions and exclusions apply, see <https://www.volkswagen.com.au/en/owners-service/service-repairs-parts/roadside-assist.html>

3. Volkswagen Care Plans are available for purchase at <https://www.volkswagen.com.au/en/owners-service/service-repairs-parts/care-plans.html> or from participating authorised Volkswagen Dealers for Eligible Vehicles and covers standard items as contained in each scheduled service interval only. The service intervals occur every 15,000 KM/12 months (whichever occurs first) for all models except MY18 to current Crafter vehicles and MY21 and MY22 Amarok vehicles, which are scheduled to occur every 20,000 km/12 months (whichever occurs first). These Care Plans can only be purchased prior to the first scheduled service and up to 22,500 km/15 months (whichever occurs first) for all models except MY18

to current Crafter vehicles and MY21 and MY22 Amarok vehicles which is 30,000 km/15 months (whichever occurs first). The timeframe takes effect from when the vehicle is first reported in our system as 'sold'. Discount structure varies by model. For details of what is not included in a scheduled service, please refer to the program terms and conditions.

4. Volkswagen Assured Service Pricing is current as at the date the customer obtains a price from the Volkswagen Service Pricing Guide or from a participating authorised Volkswagen dealer and is subject to change without notice. Customers are advised to confirm current pricing on the Volkswagen Service Pricing Guide or with an authorised Volkswagen dealer on the day of each scheduled service. Volkswagen Assured Service Pricing applies to the cost of standard items in each of the first 5 standard scheduled services of your vehicle which are scheduled to occur at every 15,000 km/12 month interval (whichever occurs first) or for MY18 to current Crafter vehicles and MY21 and MY22 Amarok vehicles only, 20,000kms/12 month interval (whichever occurs first). Exclusions and conditions apply. For more details on the eligible models, pricing, items not included and for full terms and conditions, please see <https://www.volkswagen.com.au/app/locals/service-pricing-guide>. Volkswagen Australia reserves the right to at any time modify or discontinue the Volkswagen Assured Service Pricing program.

[^]Volkswagen Guaranteed Future Value consists of an option to return your vehicle to Volkswagen Financial Services (VFS) ABN 20 097 071 460, Australian Credit Licence 389344, at the end of the term and requires VFS to purchase the vehicle at an agreed price determined by VFS, known as the Guaranteed Future Value (GFV). [#]Eligible loan terms include 12-60 months, vary by model and are subject to change, ask dealer for more information. At the end of the term, you can elect to: (1) trade-in; (2) return; or (3) retain the vehicle by paying the GFV, which is a lump sum owed to VFS at the end of the loan term after all repayments have been made. You will be liable for any loan contract deficit and additional charges if you exceed the nominated kilometre allowance and/or the vehicle is not in an acceptable condition. Available on new and demonstrator Volkswagen vehicles for selected models. Contact your Official Volkswagen Dealer to verify eligible vehicles for this program. Fleet, government, rental buyers, hire car and chauffeur companies excluded.

*The Start/Stop system is designed to reduce fuel consumption and CO2 emissions. It achieves this by automatically switching off the engine while the vehicle is stationary and then starting it again automatically when the driver wants to drive off. There are certain operating conditions where the Start/Stop system is deactivated (e.g. during engine warm-up), please refer to the owner's manual for full operating information.

~ Emission level according to European Regulation (EC) No. 715/2007 and Regulation (EC) No. 692/2008, UN ECE R83/06 and later amendments.

** Fuel consumption figures according to ADR 81/02 derived from laboratory testing. Factors including but not limited to driving style, road and traffic conditions, environmental influences, vehicle condition and accessories fitted, will in practice in the real world lead to figures which generally differ from those advertised. Advertised figures are meant for comparison amongst vehicles only.

Please note figures are sourced from overseas data where equipment levels by model variant may vary.

^x Please note running clearance measurement may vary with wheel size, tyre pressures, tread depth.

Vehicle Towing

The Owner's Manual contains both general and detailed specific information relating to the vehicle's ability for the towing of trailers and should be referenced to ensure familiarity with its contents. In addition to this information it should also be noted that for the Australian market the maximum permitted vertical load exerted by the trailer drawbar on the ball head of the towing bracket must not exceed the values as stated and shown for each model type below.

Different trailer types and different trailer manufacturers have varying towball downloads. The customer should always contact the trailer manufacturer for information as to the maximum download weight. Volkswagen does not recommend the fitting of load levelling or weight distribution devices when used with a Volkswagen Genuine towbar. When fitted and used correctly, the Volkswagen Genuine towbar is capable of meeting the towbar/towball capacities as stated and shown for each model type below.

Towing Capacity

NOTE: Towbar capacities must not be exceeded. Volkswagen Group Australia recommends the use of a Genuine Volkswagen Accessory Towbar. Volkswagen Group Australia does not endorse or will not be held liable for any claim, loss or damage arising from the use or fitment of electronic trailer brakes.

Tiguan Variant	Model Code	Towbar Capacity Unbraked	Towbar Capacity Braked
110TSI Life	AX**N6	750 kg	1,800 kg
132TSI Life	AX**Q0	750 kg	2,500 kg
162TSI Elegance/ R-Line	AX**WT	750 kg	2,500 kg
235TSI R	AX**TT	750 kg	2,200 kg

NOTE: The Maximum Permitted Gross Rear Axle Weight Rating is inclusive of the Maximum Downball Weight and must not be exceeded. The Maximum Downball Weight must also not be exceeded.

Tiguan Variant	Model Code	Maximum Permitted Gross Rear Axle Weight Rating	Maximum Downball Weight
110TSI Life	AX**N6	1,080 kg	200 kg
132TSI Life	AX**Q0	1,150 kg	200 kg
162TSI Elegance/ R-Line	AX**WT	1,150 kg	200 kg
235TSI R	AX**TT	1,140 kg	200 kg

NOTE: The Maximum Gross Vehicle Mass (GVM) and Maximum Gross Combination Mass (GCM) must not be exceeded.

Tiguan Variant	Model Code	Maximum Gross Vehicle Mass (GVM)	Maximum Gross Combination Mass (GCM)
110TSI Life	AX**N6	2,090 kg	3,890 kg
132TSI Life	AX**Q0	2,260 kg	4,760 kg
162TSI Elegance/ R-Line	AX**WT	2,260 kg	4,760 kg
235TSI R	AX**TT	2,280 kg	4,480 kg

Please note towbar capacities are applicable to the Genuine Volkswagen Accessory towbar. Volkswagen Group Australia does not endorse or will not be held liable for any claim, loss or damage arising from the use or fitment of electronic trailer brakes. Data is valid for model year 2024 vehicles.

Glossary

4MOTION with R-Performance Torque Vectoring

The 4MOTION all-wheel drive system with R-Performance Torque Vectoring is the new control centre that distributes the engine's output to the four driven wheels.

A new rear final drive distributes the drive power of the turbocharged petrol engine in the Tiguan R not just between the front and rear axles, but also variably between the two rear wheels. This makes it possible to significantly increase the agility particularly when cornering.

The all-wheel drive is also networked via the Vehicle Dynamics Manager (VDM) with other running gear systems such as the Extended Electronic Differential Locks (XDL) and Adaptive Chassis Control.

Thanks to this close integration of the different systems, the new Tiguan R offers optimum traction characteristics and neutral handling with the utmost level of precision.

Adaptive Cruise Control (ACC)

Adaptive Cruise Control (ACC) is an extension of the conventional cruise control system with advanced capabilities based on a radar sensor. When ACC is activated, the vehicle automatically brakes and accelerates to a speed and distance set by the driver.

If the Tiguan approaches a slower vehicle, the ACC brakes the car to the same speed and maintains the pre-selected distance. Even when a vehicle pulls into the same lane in front of you or slows, your vehicle is automatically decelerated to the pre-selected distance. If the vehicle ahead moves out of your lane, the Tiguan then accelerates up to the pre-set desired speed.

Deceleration of the vehicle may take place via intervention in the engine management system. If deceleration via engine torque is not sufficient, brake intervention takes place, braking the vehicle to a standstill if the traffic situation necessitates. ACC can be reactivated automatically by depressing the accelerator pedal.

The dynamics of the ACC system can be individually varied by selecting one of the driving programs from the driver profile selector.

Adaptive Cruise Control (ACC) cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain.

Anti-lock Braking System (ABS)

When braking, wheel speed sensors measure the road wheel speed and should one or more wheels start to lock the ABS system reduces brake pressure to that wheel. This prevents the wheels from locking during heavy or emergency braking, enabling the vehicle to remain steerable.

Anti-Slip Regulation (ASR)

ASR is a traction control system that prevents the wheels from spinning under acceleration by reducing engine torque.

Auto Hold function

As soon as the vehicle comes to a complete stop, the ABS hydraulic unit stores the vehicle's final braking pressure. So even when you take your foot off the brake pedal, all four wheels' brakes remain applied, providing increased comfort in stationary traffic. This function is released automatically when you drive off again.

Brake Assist

During emergency braking, Brake Assist aids the driver by increasing the brake pressure automatically to a level exceeding the locking limit. The ABS is thus quickly brought into the operating range, which enables maximum vehicle deceleration to be achieved.

Driving Profile Selection

Driving profile selection provides the driver with a wide-ranging choice of settings that can be made to the vehicle according to the driver's preferences. The driver has the option of choosing between the following driving profiles: Comfort, Sport, Race and Individual.

The Comfort profile offers a comfortable but dynamic driving style with a softer suspension setting of the adaptive chassis control. Comfort mode has also been designed to enhance fuel efficiency by including coasting function and by adapting engine performance, earlier gearshift points and consumption-optimised control of the air conditioning system. Sport provides faster response of the accelerator pedal, sportier damping and steering. In Race mode, damping is increased (further reducing movements of the body structure) and shift points of the DSG are configured to be even more dynamic. The Individual setting allows the driver to separately set various parameters including steering, engine, Adaptive Cruise Control (ACC) and air conditioning.

Emergency Assist

Emergency Assist monitors the driving characteristics and recognises, within the limits of the system, if the driver suddenly becomes incapable of driving (due to the vehicle not being controlled).

Emergency Assist detects a lack of activity on the part of the driver and issues repeated visual and acoustic warnings and initiates a quick jolt of the brakes to request the driver to take control of the vehicle.

If the driver remains inactive, the system automatically controls acceleration, braking and steering to slow the vehicle down and keep it in the lane. If there is sufficient stopping distance, the system decelerates the vehicle to a complete stop and switches on the electronic parking brake automatically.

When Emergency Assist is actively controlling the vehicle, the hazard warning lights are switched on and the vehicle performs a slight snaking motion within its lane to warn other road users. Ideally this will prevent a collision, or at least reduce its severity.

Emergency Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. Emergency Assist utilises both the Adaptive Cruise Control (ACC) and Lane Assist driver assistance systems. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system.

Fatigue Detection

The driver Fatigue Detection system automatically analyses the driving characteristics and if they indicate possible fatigue, recommends that the driver takes a break. The system continually evaluates steering wheel movements along with other signals in the vehicle on motorways and other roads at speeds in excess of 60 km/h, and calculates a fatigue estimate. If fatigue is detected, the driver is warned by information in the Digital Cockpit Pro and an acoustic signal. The warning is repeated after 15 minutes if the driver has not taken a break.

Fatigue Detection cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore determining whether or not they are fit to drive. A driving time of 15 minutes is required in order to assess the driver correctly. The functionality of the system is restricted given a sporty driving style, winding roads and poor road surfaces.

Electronic Brake-pressure Distribution (EBD)

Electronic, more sophisticated means of regulating the ratio of front/rear brake pressure. Settings are varied according to driving and load conditions to ensure each wheel is braked to the optimum extent.

Glossary

Electronic Stabilisation Program (ESP)

ABS and ASR traction control systems are integrated into the Electronic Stabilisation Program (ESP). In short, ESP helps ensure that the vehicle goes where you steer it even in extreme driving conditions. The ESP system constantly compares the actual movement of the vehicle with pre-determined values and should a situation arise where the vehicle starts to skid, ESP will apply the brakes to individual wheels and automatically adjust the engine's power output to correct the problem. ESP prevents the vehicle from losing control when trying to avoid an accident, for example. It also reduces the effects of understeer or oversteer.

Extended Electronic Differential Lock (XDL)

XDL is an extension of the Electronic Differential Lock (EDL) function. When cornering, XDL responds to the load relief at the driven wheel/s on the inside of a corner. The ESP hydraulics are used for the XDL to apply pressure to the wheel on the inside of the corner in order to prevent wheel spin. This improves traction and reduces the tendency to understeer. As a direct result of the one-sided and precise braking pressure, cornering is sportier and more accurate.

Front Assist with Pedestrian Monitoring

The Front Assist is both a high and low speed AEB monitoring system which uses a radar sensor to detect critical distance situations and thus help to shorten the braking distance, reducing the risk of a rear-end collision.

The traffic ahead is monitored constantly by the radar at the front. If a vehicle is detected ahead of you in the lane, the distance and the speed relative to it are calculated. If the gap is closing too fast, Front Assist initially warns the driver by means of an audible as well as a visual signal. At the same time, the brake pads are brought into contact with the brake discs and the sensitivity of the Brake Assist is increased. This primes the braking system for a possible emergency stop. Furthermore, an automatic jolt of the brakes warns the driver of the danger. If the driver also fails to react to the warning jolt, Front Assist brakes automatically, helping to avoid a collision or reduce the severity of the accident.

At vehicle speeds below 30km/h, Front Assist monitors the area ahead of the car for vehicles which might present a threat of collision. If a collision is likely, Front Assist first pre-charges the brakes and makes the emergency Brake Assist system more sensitive: if the driver should notice the risk, the car is ready to respond more quickly to their braking action. However, if the driver still takes no action and a collision becomes imminent, Front Assist applies the brakes very hard. If the driver intervenes to try to avoid the accident, either by accelerating hard or by steering, Front Assist will deactivate and allow the driver to complete the avoidance manoeuvre.

Pedestrian Monitoring is an extension of the Front Assist monitoring system. The system uses a camera to monitor the side of the road and a radar sensor in the radiator grille to monitor the area in front of the vehicle and within the limits of the system, register certain situations, for example a pedestrian stepping onto the road suddenly. Using the camera the system detects pedestrians on the side of the road and gives an immediate acoustic and visual signal to warn the driver of the possibility of danger. If the radar sensor than detects the pedestrian and the driver does not brake, the system initiates a jolt of the brake as a warning about the critical situation, while at the same time preparing for hard braking. If the driver fails to react, the system automatically performs emergency braking, within system limits. Ideally this will prevent a collision, or at least reduce its severity.

Front Assist with Pedestrian Monitoring cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

Lane Assist

Lane Assist is a lane departure warning system that is designed to help reduce the likelihood of the vehicle leaving the road or crossing into an oncoming lane and therefore the risk of accident as a result of driver distraction or a lapse in concentration.

The Lane Assist system monitors the road ahead with the aid of a camera (located near the interior rear-view mirror) which recognises lane markings and evaluates the position of the vehicle. If the vehicle starts to leave the lane, the Lane Assist system takes corrective steering action. If this is not sufficient the driver is warned about the situation by a steering vibration and is asked to take over the steering. Additionally, if no active steering movements by the driver are recognised for longer than approximately 8 seconds, a message will appear in the Multi-Function Display in conjunction with a warning tone. The corrective steering function can be overridden by the driver at any time and the system does not react if the turn indicator is set before crossing a lane marking.

Lane Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore staying in the lane at all times. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system. The Lane Assist system does not activate at a vehicle speed of less than 65km/h.

Manoeuvre braking

Manoeuvre braking assists the driver to avoid or reduce damage in a potential collision by initiating emergency braking. It supports the driver during forward and reverse manoeuvring in a speed range of a maximum 10 km/h. If the risk for an accident is recognised, emergency braking is initiated to minimise possible damage.

Manoeuvre braking cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. The object must be detected by the sensors. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged they need to react accordingly and stop the vehicle.

Multi-collision brake

The multi-collision brake has been designed to provide effective assistance for the driver in the moments after an accident. Multi-collision brake triggers automatic controlled braking once an initial collision has been detected so as to reduce the intensity of further accidents after a collision and can help prevent follow-on collisions with oncoming traffic.

The triggering of the multi-collision brake is based on a collision being detected by the airbag sensors. The ESP control unit limits the deceleration of the vehicle by the multi-collision brake to a defined value and vehicle speed. The vehicle can still be controlled by the driver, even when automatic braking is taking place. The driver can interrupt the multi-collision braking at any time by accelerating or braking even more strongly.

Glossary

Park Assist

The third generation Park Assist system actively helps the driver when entering or reversing into 90° parking bays, as well as reversing into and driving out of parallel parking spaces. The system works by using sensors mounted either side of the front and rear bumpers together with parking distance sensors front and rear. To park, the driver simply presses the Park Assist button to select the type of parking manoeuvre and uses the appropriate indicator as the car slowly passes the potential parking space. Sensors scan the size of the parking space as the car is driven past and the driver is alerted if the parking space is big enough. If there is sufficient space, the driver stops the car, selects the correct gear and lets go of the steering wheel.

Park Assist will alert the driver of the intended path and subsequently the appearance of obstacles in the Multi-Function Display, within the driver's field of vision. Park Assist then actively supports the driver by taking over the steering control and parks the vehicle in the available space using the ideal course, if necessary with several moves. The driver can however take over the control of the steering at any time and end the automatic parking procedure.

Park Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged or if they are uncertain of the risk, they will need to react accordingly and stop the vehicle, ending the function.

Proactive occupant protection system

The proactive occupant protection system incorporates active and passive safety elements. When the system detects a potential accident situation at speeds above approximately 30km/h, the occupants and the vehicle are prepared for a possible accident. Automatic reversible tensioning of the seat belts secures the driver and front passenger in their seats to attain the best possible protective potential of the airbag and belt system. The hazard warning lights are activated. In case of high transverse dynamics the side windows (and optional panoramic sunroof) are also closed, leaving just a small air gap. Closing of the windows offers optimal support to the head and side airbags which results in the best possible protection.

The latest generation of the Proactive Occupant Protection System can detect risks at the rear utilising the signals from the rear radar sensors for the Side Assist system. If the system recognises an immediate risk, the vehicle and occupants are prepared for a possible rear end collision by warning an approaching vehicle with fast hazard warning light frequency, closing the side windows (and optional panoramic sunroof), as well as tighten the front seat belts.

Side Assist with Rear Traffic Alert

Side Assist, is a lane change assistant that detects vehicles on the right and left hand side of the lane, in the blind spot and those vehicles coming nearer behind. The system informs with a warning light in the exterior mirror whenever a detected vehicle is close and a lane change would be dangerous. If the driver sets the indicator, the warning light begins to flash. Rear Traffic Alert warns the driver of approaching traffic at the rear of the car when reversing via an audible warning followed by a visual message in the Optical Parking System (OPS).

Side Assist also works in conjunction with the Lane Assist system. If another vehicle is in the blind spot during a lane change, the dual assist system warns the driver by means of flashing LEDs in the right-hand or left-hand exterior mirror and by vibrations on the steering wheel. It also supports the driver by means of a corrective steering intervention. This procedure occurs regardless of the state of the turn indicators.

Travel Assist

Travel Assist is an assistance system for partly automated driving. At the push of a button, Travel Assist can support the driver in monotonous and tiring driving situations commonly encountered on long motorway journeys. This system combines the functions of Adaptive Cruise Control (ACC), Lane Assist with adaptive lane guidance and Side Assist to accelerate, brake and maintain the vehicles position within its lane. The capacitive steering wheel can detect whether the driver's hands are on the steering wheel in readiness to steer the vehicle and will issue a visual and audible warning when not detected.

Travel Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. Travel Assist has been developed for use only on motorways. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system.
